

Standoff Holder for Ultrasound Probe

ABSTRACT

An accommodative standoff holder 10 which can be used for both diagnostic and therapeutic ultrasound is disclosed. The described standoff holder 10 has the ability to be mounted on and utilized with transducers 20 of different sizes and shapes. The standoff holder 10 includes a gel insert 26 which is removable and self adjusting assuring contact between a human body, an animal, or other object and the acoustic window 22 of a transducer 22. [Further, a gel insert 26 and method of making gel inserts 26 from a gel pad 24 is described.]
